

COS40006 COMPUTING TECHNOLOGY

PROJECT B

About This Unit

Hi students! Welcome to COS40006 Computing Technology Project B. COS40006 Computing Technology Project B is a 12-week unit that forms the second half of the two-semester Capstone project with the following pre-requisites COS40005 Computing Technology Project A. The projects are continuations of the projects in the same team and supervisory arrangements established in Semester One for COS40005 Computing Technology Project A. Students will be assessed on participation, effective contribution, documentation, development process, self-reflection, and final deliverable.

Each student team will complete four sprints within the course of the semester. At the beginning of the sprints, teams need to prepare and agree on a plan for the sprint; during the sprint, they should work towards achieving the plan, and at the end of the sprint, teams need to review and reflect on the sprint. A report needs to be submitted at the end of each sprint. Clients should be kept informed of the progress of each sprint. We recommend rotating the "scrum master" role in the team for different sprints.

Weekly engagements -

1. Students are to watch the online seminar videos

2. Teams need to meet at least once a week among themselves (suggest using lecture / tutorial hours)
3. Teams need to meet with their project supervisor ideally once a week or at least once per sprint
4. Teams need to meet with their clients as needed

Lecture / tutorial times can be used for team meetings, a separate time for supervisor or client meetings can also be arranged depending on the agreement of all parties.

Unit Structure

To ensure that you accomplish the expected learning outcomes, you will be required to spend 8.5 hours in addition to the 4 contact hours. This unit is offered through blended mode (online sessions and physical meetings).

Please refer to the Unit Outline (under Syllabus on Canvas) for further details on the schedule and assessments.
