What is

“Ethical” AI

What is Ethical AI?

Ethical AI is artificial intelligence that **adheres to well-defined ethical guidelines** regarding fundamental values, including such things as individual rights, privacy, non-discrimination, and non-manipulation.

- Ethical AI places fundamental importance on ethical considerations in determining legitimate and illegitimate uses of AI.
- Organizations that apply ethical AI have clearly stated policies and well-defined review processes to ensure adherence to these guidelines.

How AI is bringing film stars back from the dead

19 July 2023

espondent

Consent

The actor can't agree posthumously.

Emotional manipulation

Audiences may not know what's real.

Ownership

Who controls the actor's digital likeness - family, studio, or AI creator?

Authenticity

Are we celebrating legacy or exploiting it?

OpenAI's Sora Bans Deepfakes of Public Figures, Except for Dead Celebrities

Sora users have been able to create AI-generated videos of Michael Jackson, Tupac Shakur, and even Malcom X. OpenAI explains why.

OUR EXPERT

Michael Kan
Senior Reporter

When he's not battling bugs and robots in Helldivers 2, Michael is reporting on AI, satellites, cybersecurity, PCs, and tech policy.

October 2, 2025

"As a safeguard, all Sora videos currently include a **watermark**."

AI + CGI can recreate deceased actors using old footage, photos, and voice models.

But **should** they?

'We definitely messed up': why did Google AI tool make offensive historical images?

Experts say Gemini was not thoroughly tested before it was released. The AI generator depicted variety of historical figures with different skin colours.

“Safety testing to prepare for future generations of this technology is really **important** but we have time to work on that as well as in parallel focusing on more immediate **risks** and **societal challenges** such as the dramatic increase in deepfakes, and how to use this great technology for good,” she says.

0 Global Standards

unesco

Recommendation on the Ethics of Artificial Intelligence

UNESCO produced the first-ever global standard on AI ethics – the '**Recommendation on the Ethics of Artificial Intelligence**' in November 2021. It is applicable to all 194 member states of UNESCO.

The protection of **human rights and dignity** is the cornerstone of the Recommendation, based on the advancement of fundamental principles such as transparency and fairness, always remembering the importance of human oversight of AI systems.

However, what makes the Recommendation exceptionally applicable are its extensive **Policy Action Areas**, which allow policymakers to translate the core values and principles into action with respect to data governance, environment and ecosystems, gender, education and research, and health and social wellbeing, among many other spheres.

Full text of the Recommendation →

BETTER POLICIES FOR BETTER LIVES

AI principles

The OECD AI Principles are the first intergovernmental standard on AI. They promote innovative, trustworthy AI that respects human rights and democratic values. Adopted in 2019 and updated in 2024, they are composed of five values-based principles and five recommendations that provide practical and flexible guidance for policymakers and AI actors.

What You Need To Know

UNESCO Ethical AI: Key Principles

- Human Rights & Dignity → AI must uphold fundamental freedoms, equality, and diversity.
- Human Oversight & Agency → Humans remain in control; AI should not replace critical judgment.
- Fairness & Non-Discrimination → Avoid biases in data, design, and deployment of AI systems.
- Transparency & Explainability → AI processes must be understandable and accountable.
- Environmental & Societal Wellbeing → Promote sustainability, avoid harm to communities and ecosystems.
- Responsibility & Accountability → Clear liability for AI outcomes rests with people and organizations.

Conclusion

The background is a deep blue gradient. It features several abstract elements: a large, dark, wavy shape on the left side; a series of light blue, glowing hexagonal outlines in the top right corner; and a series of light blue, glowing hexagonal outlines in the bottom left corner. A prominent, glowing, wavy line composed of many small, light blue dots runs diagonally across the bottom right corner.

Key Takeaways

- Bias is the biggest risk → poor data = discriminatory AI outcomes.
- Transparency matters → users should understand how decisions are made.
- Accountability is shared → developers, deployers, and organizations must own outcomes.
- Human oversight is non-negotiable → AI should assist, not replace, critical judgment.

Global compliance is rising.

→ EU AI Act, UNESCO, OECD will shape future careers.

Kaodim!
