

Sprint 3 Report

Unit code: COS40006

Unit Name: Computing Technology Project B

Submission date:

[This is a template, remove any text within third brackets before submission]

ACKNOWLEDGMENT OF COUNTRY

[Add a statement on acknowledgment of the country.]

Each team member identifies:

the Traditional Owners of the land they lived on while completing this work (if living in Australia)...[Please complete the statement].

CONTRIBUTION SUMMARY (THIS SPRINT)

All team members should complete the following table together. You can provide a yes/no response or a brief comment where appropriate.

	Contribution	Initiatives	Communication					Respect
Team Member	Finished tasks in time or on time with an acceptable quality	Self-assigned tasks and proactively found solutions to problems	Attended all team meetings	Attended all supervisor meetings	Attended all client meetings	Replied every time within an acceptable timeframe	Kept the team updated about the status	The student respected others and listened to different opinions
Member 1								
Member 2								
Member 3								
Member 4								
Member 5								

CONTRIBUTION DETAILS (THIS SPRINT)

In this section, every member of the team should write a summary of what they have contributed during this sprint. All contributions must be supported by evidence, such as the number of GitHub commits, a screenshot of developed screens, a summary/outcome of research, etc.

1. SPRINT PLAN

This document can be considered as a continuation of the last sprint report, which ran from week 3 to week 6. In this section, the teams need to provide a detailed sprint backlog, along with estimation for this sprint (week 7 to week 9). The roles (specifically the scrum master) should be specified for this sprint, and the overall goal of the sprint should be discussed. As part of the sprint, if you plan to develop any artifact (module of application, any other documentation such as test plan, user document, etc), please list all those, and those should be submitted as an attachment to this report.]

2. FINAL DOCUMENTATION DELIVERABLES

[At this stage, most of the teams have a fully functioning application. It is a good time to finalize all the final deliverables, including the technical documentation that goes with project implementations. Note that these technical user documentations can include a **Usual Manual** and a **System Installation (Deployment) Manual**, for the user and system admin to use, respectively. There can be other documentation needed specific to the project. There are no templates for these documents as they are system/project specific. Teams are advised to follow common sense to create these documents from the user and system admin perspectives for their system, to provide clear, concise and instructive information, so that the user and the system admin can follow them to use and install/deploy their system. Depending on the project, there can be other documentation required. Please discuss and finalize these with the client.]

3. SPRINT PROGRESS

This section describes the progress of the sprint with relevant evidence (e.g., screenshots of the repository, task board, etc). The evidence can be discussed with the supervisor.

4. SPRINT REVIEW (CRITICAL REVIEW OF THE PRODUCT)

[Add a detailed report on the following

- Description of the demonstration session outlining the facilitation process to indicate that professional conduct was displayed in communication with the client
- Feedback received from the client on the deliverable (must indicate if the increment was deliverable or not)
- A critical analysis of progress against the plans, particular progress achieved, challenges faced etc. for the deliverable]

5. RETROSPECT (CRITICAL REVIEW OF THE PROCESS)

[This should present a summary of how the overall team process was followed, including strengths, challenges and bottlenecks encountered during the sprint, how they were addressed, and a review of the team code of conduct. The student teams are requested to review relevant cybersecurity and ethical protocols (for example, Australian Privacy

Principles) for any data collection, any development, and/or testing that is planned or being done as part of the project.]

6. LESSONS LEARNED (CRITICAL REVIEW OF SPRINT ONE EXPERIENCE AND FUTURE PLAN)

[Add a list of lessons learned from working together on the project in this sprint. List a clear set of to do/recommendation for improvement in the future sprints. Please note this should not be generic – it should be specific to this sprint.]
