

Research Report

PORTFOLIO TASK 1(A)

Unit code: COS40005/EAT40005

Unit Name: Computing/Engineering Technology Project A

Submission date:

<This is an individual assessment; every student needs to complete and submit this report individually.>

<Please remove the instruction texts in the third brackets before submission.>

1. RESEARCH ON THE BUSINESS DOMAIN

[At this stage, students have the idea of what the business domain of the project they are going to work on as part of the Capstone unit. In this section, students are requested to conduct research on the business/application domain (characteristics, strengths, challenges), find similar solutions existing on the market, and identify the gap that the proposed project will address.]

2. RESEARCH ON END USERS

In this section of the report, students must identify the system's end users and describe their unique characteristics, needs, and preferences. Research is necessary to understand these.]

3. RESEARCH ON THE SOLUTION DOMAIN

[In this part of the report, outline and detail the research that has been undertaken to understand the potential technological platforms and programming languages, sensors and so on. A critical analysis is needed to understand the most appropriate technical architecture of the system, along with suggestions of architecture, platform, tool, programming language, devices, sensors etc. (as appropriate for the project).]

4. KOST ANALYSIS

[Present a mapping of knowledge, skill and technology requirements of the selected architecture design to what you have as a final year student. Clearly indicate any gap that may exist and a plan to overcome it. Students may need to discuss potential gaps (individual limitations) with their team and see if the team can help overcome them.]

5. ETHICAL CONSIDERATIONS

[Review relevant ethical protocols and standards that need to be adhered to for the particular problem you are solving. (e.g. ethical considerations for health data collection, AI implementation). The Australian Privacy Principles can be a good starting point. You should also review some Australian and international Acts related to your area. This section can be enriched with a table to indicate what protocols apply to your project and how you propose to ensure the protocols are followed.]
